

TEKCEL OPTICAM

THE COMPLETE PRINT to CUT SOLUTION

◀ THIS IS HOW IT STARTS

With most sign shops either having recently purchased or are seriously looking at buying a flat bed printer TEKCEL's Opticam print registration system is becoming the norm not the exception.

With customer demands on the sign shop for more & more speed & versatility, a full print to cut solution makes obvious commercial sense. A company's ability to control all aspects of their business & not have to out source is another great reason to embrace this great new technology

Since its release at the Sign UK show in October 2007, sales & interest in the Opticam print registration-system have been very encouraging. It is for this reason that TEKCEL ask all customers to seriously consider the complete Opticam print & cut solution when ordering their TEKCEL CNC flatbed router, as they are really going to need it, if not right now then very soon. As our customers are saying "you can't do without one these days, even if you haven't got a large format flat bed printer the company supplying you has". You can print on vinyl & apply it to a substrate, either way the only way to cut the shapes out quickly with the quality of edge finish required by the customers these days is with a CNC router.

Tekcel CNC routers fitted with Opticam print registration system, will cut all the substrates now commonly being run through flatbed printers, Aluminum, Acrylic, MDF, Aluminum Composite Material, Foamex, & now even X board with Tekcel's revolutionary Opticut system, as Tekcel say "if you can fit it under the gantry we can probably cut it"

As the Opticam system can be retro fitted to existing TEKCEL CNC routers, it means customers can upgrade their older machines to the latest state of the art technology.

The Tekcel CNC routers, Opticam print registration system & the complete machine controller have all been designed & manufactured in Tekcel's Perth factory, meaning system functions can be completely customized to your requirements, something no other manufacturer can attain.

AND THIS IS HOW IT FINISHES, ▶
